

Algorithm

CHD was added to box #1. New box #2 was added for “CHD or CHD risk equivalent?”. Adding up cardiac risk factors was removed from box #3. Boxes #4 and #5 were combined into new box #5 and LDL threshold was modified. Age parameters related to diabetes was added to box #7. Boxes 9, 11-12 and 14-16 were removed.

Annotations

- 1) CHD added as a condition for entering the algorithm.
- 2) Re-ordered and is the new annotation #11. Recommendations of the annotation are highlighted at beginning of annotation. Omega-3 Fatty acids content from Appendix C inserted here.
- 8) New annotation #10. Information from Appendix C has been incorporated into this annotation. Drug dosages removed. Content reorganized. New references added: Taylor, (2009); Cannon, (2010); Barter, (2007); Sharma, (2009).
- 9) Information regarding considering a statin if LDL is greater than 130 was added.
- 10) New annotation #12. Retitled “Ongoing Care.” Shared decision making content added.
- 12) Deleted.
- 13) Deleted.
- 14) Incorporated into new annotation #12 as part of ongoing care.

Aims & Measures

- 1) Aim modified to include those with CHD risk equivalent or those who have LDL < 70 mg/dL.
- 2) Aim modified to include those with diabetes age 40 and over and those who have a 10-year risk of 10 - < 20% being appropriately treated for lipids.

- 3) Deleted.
- 4b) Deleted.
- 4c) Modified to include patients with CHD or CHD risk equivalent who are on lipid lowering medication, but with most recent LDL > 100 mg/dL, percentage of patients on maximal dose of a potent statin.
- 5b) Deleted.

Appendices

Appendix A deleted and incorporated into new annotation #11.

Appendix C deleted. Relevant information incorporated in annotations throughout the document.

Resources

ICSI Shared Decision-Making Model added as a resource.
