Zero Suicide Summit & Learning Collaborative Begins May 1st, 2020

ICSJ members are invited to join a 12-month Zero Suicide Learning Collaborative

The MN Health Collaborative and Minnesota Department of Health are pleased to announce a new partnership, the Zero Suicide Initiative, to advance suicide prevention and intervention efforts within healthcare. On May 1, 2020 the Zero Suicide Summit will bring teams from more than 10 Minnesota healthcare delivery systems and health plans together to design and nurture a less fragmented system to support patients at risk for suicide.

Using the seven essential elements of the national Zero Suicide Model, this learning action network will challenge organizations to take their suicide prevention efforts to the next level through transparent sharing of best practices. Free education and subject matter expertise are available to participants as they identify areas where training and support are needed.

Zero Suicide Summit & Learning Collaborative Kick-off

Friday, May 1, 2020, 9:00 am - 4:00 pm
Maple Grove Community Center
12951 Weaver Lake Rd
Maple Grove, MN 55369

If you are an ICSI member organization interested in participating in this initiative, please contact Sarah Horst via email.

MN Health Collaborative Work Featured at the 2020 Collective Impact Convening in May

We're excited to announce that ICSI's Claire Neely and Tani Hemmila have been invited to share insights on the MN Health Collaborative's macro-systems
change work at the national Collective Impact Convening being held in Minneapolis from May 6-8, 2020.

Their presentation is entitled **Building Collective Systems Thinkers: Six Conditions of Systems Change** and will cover how ICSI works across sectors to tackle the toughest issues like opioids, mental health and social needs. Collective impact brings people together, in a structured way, to achieve social change - taking uncommon goals and producing uncommon results.

**More information about this event and all its speakers is available here.**

---

**Welcome Wilderness Health**

ICSI is pleased to announce that Wilderness Health has joined ICSI as a provisional member. Wilderness Health is a collaborative of independent health care providers, both critical access hospitals and clinics, in Northeastern Minnesota and Northwestern Wisconsin.

By working together, the group is advancing patient and community health outcomes, improving the patient experience, and lowering costs. The collaborative is focused on rural health issues that impact its members and their patient base. [Learn more about Wilderness Health here.](#)

Updates to Palliative Care and Perioperative Opioid Guidelines

The Palliative Care for Adults Guideline defines appropriate evaluations and outcomes. This guideline attempts to equip the clinician with knowledge of appropriate discussions, clinical interventions, and utilization of palliative care and hospice. It is appropriate for adult patients who still desire curative or life-prolonging treatments, or patients who are best served by active end-of-life management. Read more about these updates here.

The recently updated ICSI Perioperative Guideline has been enhanced to include a new section, Perioperative Opioid Management. The new section addresses the entire continuum of Perioperative Opioid Management (preoperative, intraoperative and postoperative). The scope and target population are adults (18 years of age and older) undergoing elective surgery.
